**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1761

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-31 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicant does not teach what is meant by “essentially solid” as the use of this phrase does not clearly set forth limits on the claims.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-31 are indefinite as to the use of “essentially solid” as the use of this phrase does not clearly set forth limits on the claims.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1761

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Goodacre et al (EP0334617) for the reasons set forth in rejecting the claims in the last office action. The amendments to the claims are not seen to influence the conclusion of unpatentability previously set forth.

Goodacre et al teach a sweetener composition comprising agglomerating hollow spheroids or part spheroids of microcrystalline sucrose with sucralose and a binder (i.e., sucrose) as is claimed (see entire document, especially page 2, lines 3-5; page 3, lines 9, 17-21, 30-34, 60, and 62; Examples 2, 4, and 10, and; Claims 1, 11-14, 18, and 19).

The claimed Hunter values would be no more than inherent to Goodacre et al as the same components and process steps are used.

Applicant's arguments filed August 21, 2007 have been fully considered but they are not persuasive.

Applicant argues that the prior art does not teach an essentially solid core.

Goodacre et al teach a sweetener composition comprising agglomerating hollow spheroids or part spheroids of microcrystalline sucrose, generally bound to crystals of sucrose, with sucralose and a binder (see abstract). It is not seen how the claimed "essentially solid core" differs from the sucrose crystals of Goodacre et al.
